REDUX

Redux is a JavaScript library commonly used with React for managing application state. It provides a centralized store that holds the entire state of your application, making it easier to manage and access state data from any component.

REACT ROUTER

Take your React applications to the next level with React Router! This declarative routing library allows you to define dynamic routes and handle navigation seamlessly within your React applications

AXIOS

Simplify data fetching in your React applications with Axios! This promise-based HTTP client offers a simple and intuitive API for making AJAX requests, enabling you to fetch data from servers with ease.

STYLED COMPONENTS

Enhance the styling of your React components with Styled Components! This CSS-in-JS library allows you to write CSS directly within your JavaScript code, making styling more modular and maintainable.

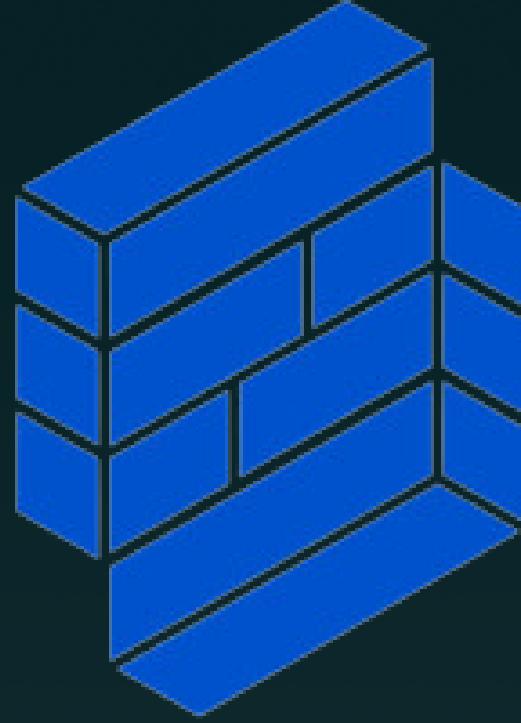

MATERIAL-UI

Embrace Google's Material Design in your React applications with Material-UI! This popular React component library provides a wide range of pre-designed components for building beautiful and responsive user interfaces.

FORMIK

Simplify form management in your React applications with Formik! This form library provides a declarative approach to handling form state, validation, and submission, making form development a breeze.

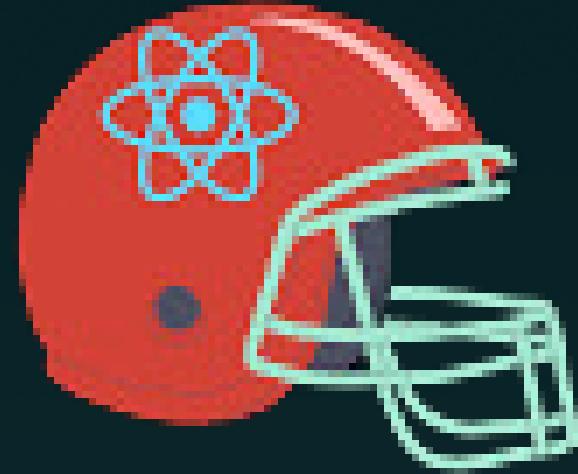

REACT QUERY

Optimize server-state management and data fetching in your React applications with React Query! This powerful library provides hooks for fetching, caching, and updating data, enhancing performance and scalability.

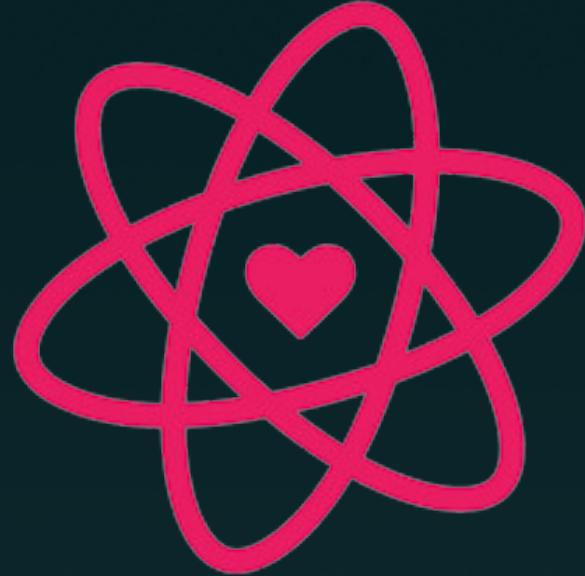

REACT HELMET

Improve SEO and accessibility in your React applications with React Helmet! This library allows you to dynamically update document head metadata, including page titles, meta tags, and more, for improved search engine visibility and user experience.

React Icons

Spruce up your React applications with React Icons! This library provides a collection of popular icon packs as React components, making it easy to add icons to your application without the need for additional dependencies.

10

REACT TESTING LIBRARY

Ensure the reliability of your React components with React Testing Library! This lightweight testing library encourages developers to write tests that resemble how users interact with the application, improving test coverage and code quality.

WHICH ONE'S NEW TO YOU?
